

OUR COMPETENCE IS

FINE ORGANIC SYNTHESIS

CLUSTER OF EXCELLENCE

THE CHEMISTRY CLUSTER IN CENTRAL GERMANY

Already in 2006, the cluster 4chiral was founded in Bitterfeld-Wolfen – a town in Central Germany's chemistry triangle. Starting with only seven locally established SMEs, today, this horizontal network comprises 30 companies and about 10 research partners of public institutes and universities. The common subject is "(bio) chemical synthesis" – or in other words: "To create value by transforming matter". The companies of 4chiral not only share the same activity fields, but – as independent,

mainly staff-owned SMEs - also a comparable culture, flexibility and customer focused approach. Together, nearly every request regarding the development of new syntheses or the manufacturing of fine chemicals can be addressed. These activities comprise everything from consulting, research, computational modelling to enzymes and GMP or ton scale production. Contact us and we will find the right expert for your tasks.
